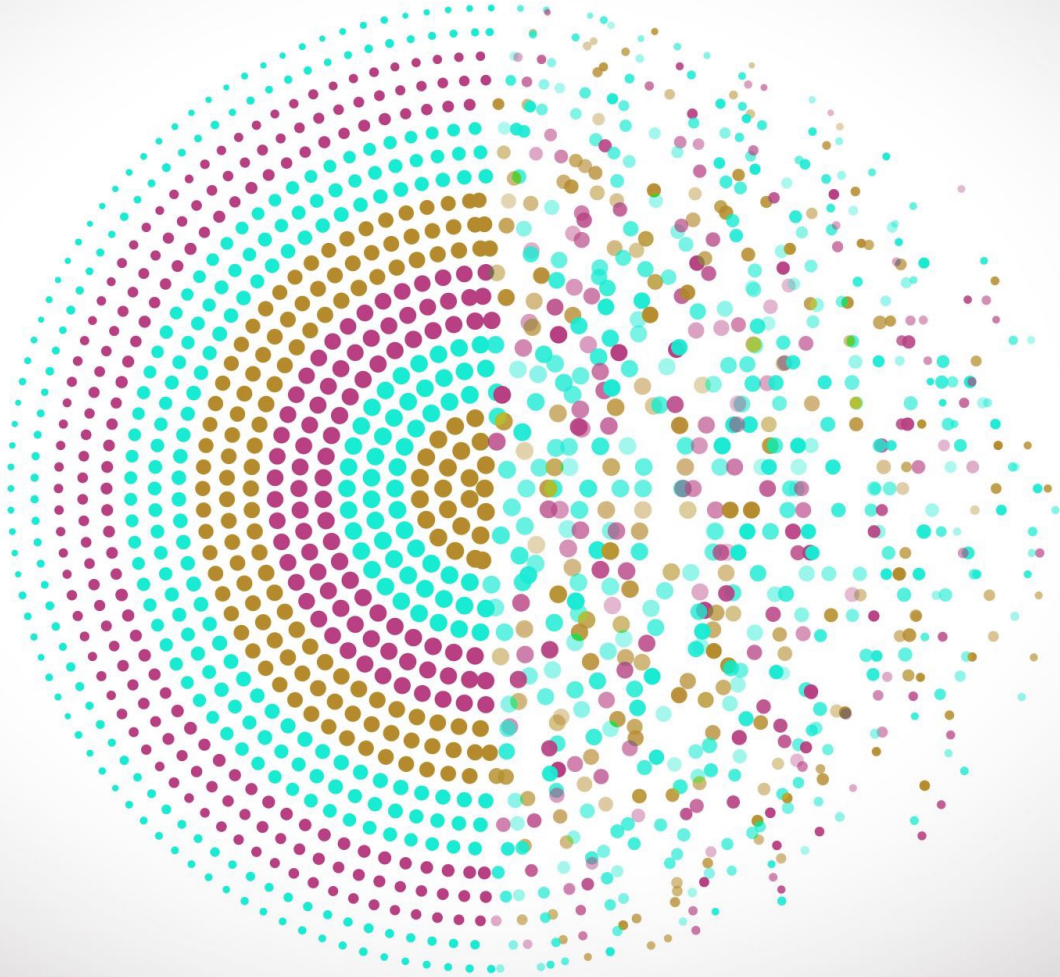
The Center for Innovative NeuroTech Advancement (CINTA) & NeuroTech Harbor (NTH) Announce the Cycle 3 Award Competition



Supported by the NIH Blueprint MedTech Program

Blueprint MedTech Incubator Hubs

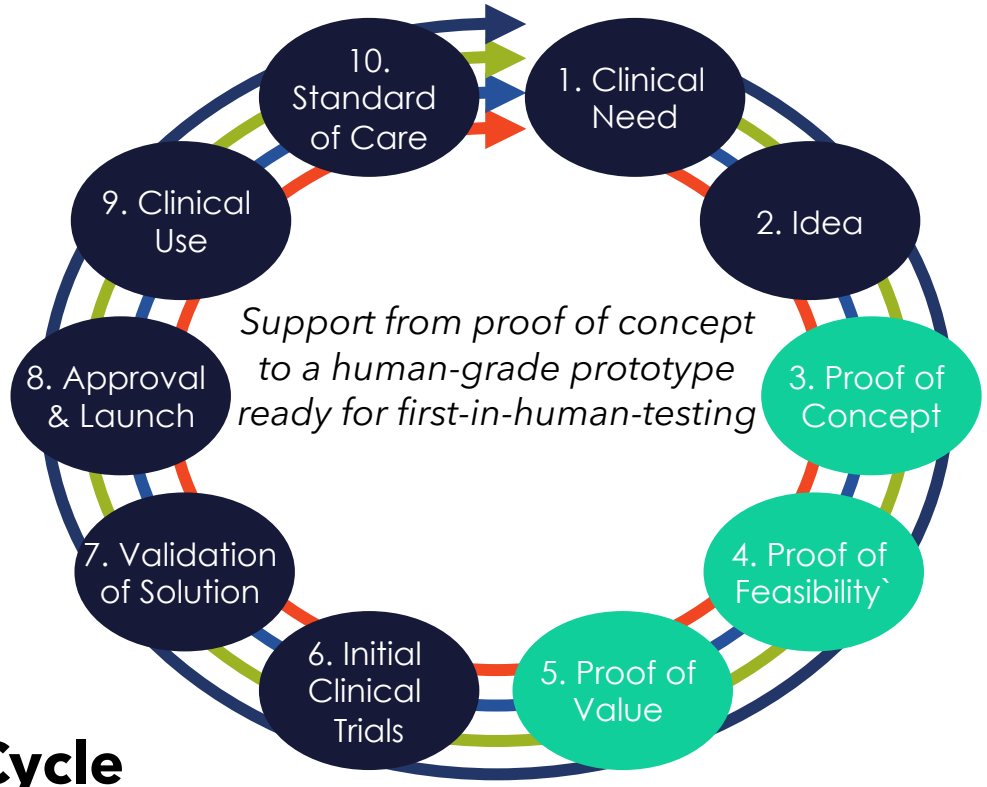
- CINTA (Center tor Innovative Neurotech Advancement), a program within CIMIT (Steven Schachter, MD as PI and Paolo Bonato, PhD as co-PI from Spaulding Rehabilitation Hospital).

- NTH (NeuroTech Harbor), a partnership between Johns Hopkins University and Howard University (Sri Sarma, PhD as contact PI and Evar Nwulia, MD).

Blueprint MedTech Incubator Hubs Mission

Mission

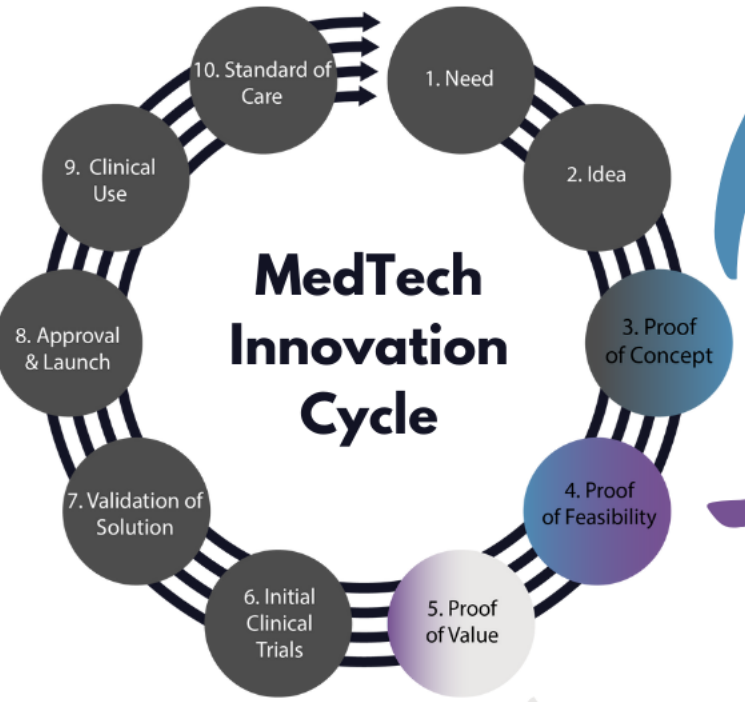
- To accelerate the development of emerging, ground-breaking technologies into first-in-human studies along the path to commercially viable, clinically focused solutions for disorders involving the nervous system.



Healthcare Innovation Cycle

- To catalyze translation along 4 key domains in the innovation cycle: **Technology**, **Regulatory**, **Market/Business**, **Clinical**

Which funding path is right for my solution?



Ongoing planning and discovery takes place in 4 key domains throughout the innovation journey. Learn more about these domains and associated milestones at gaits.org.

Key Risks	Funding Path	Milestones and Tasks
Is my concept valid? I have an idea and there is a clinical need.	EXPLORATORY/ DEVELOPMENTAL RESEARCH GRANTS (e.g., R01/R21/REACH)	• Technology concept and intended use formulated • Technology feasibility studies • Experimental proof of concept validation
Will my technology work? Is there a motivated customer? I have a prototype that works as expected and can demonstrate results.	BLUEPRINT MEDTECH INCUBATOR HUB PROJECTS Blueprintneurotech.org	• Technology development project plan • Quality management system design & development • Prototype development and verification • Usability studies to optimize technology • Technology validation in pre-clinical environment
Will the technology work in humans? My solution will be ready for first-in-human studies in 1-2 years or less.	BLUEPRINT MEDTECH TRANSLATOR PROJECTS UG3/UH3, PAR-21-315; U44, PAR-21-282	• GLP Pre-clinical safety and effectiveness studies • GMP pilot production and validation • IDE or IRB • First-in-human safety and effectiveness studies

Funding Opportunity https://blueprintneurotech.org/

- Awards from NTH or CINTA will rarely exceed $500,000 in direct costs per year for a period of up to 4 years. Indirect costs will be provided at your institution's Federally negotiated rate (or 10% de minimis).
- In addition to monetary support, awardees will receive ongoing, specialized support from executive mentors experienced in developing and commercializing neurotech devices.
- Awardees will work with their executive mentor each week to focus on business, regulatory, clinical, and technical factors that may impede commercialization.

Blueprint MedTech Resources

- Resources to plan and support prototype development, team building, needs assessment, and other early translational activities.
- Additional assistance from hubs and consultants (e.g., design, regulatory, reimbursement, intellectual property, commercialization, and strategic partnership issues).
- The cost of resources provided by the hubs and NIH do not need to be included in the proposed budget.
- Other resources listed on the Blueprint MedTech website

https://neuroscienceblueprint.nih.gov/neurotherapeutics/blueprint-medtech/resources

Participating Centers and Institutes

- National Institute of Biomedical Imaging and Bioengineering (NIBIB),
- National Center for Complementary and Integrative Health (NCCIH),
- National Eye Institute (NEI),
- National Institute on Aging (NIA),
- National Institute on Alcohol Abuse and Alcoholism (NIAAA),
- *Eunice Kennedy Shriver* National Institute of Child Health and Human Development (NICHD),
- National Institute on Drug Abuse (NIDA),
- National Institute of Dental and Craniofacial Research (NIDCR),
- National Institute of Mental Health (NIMH),
- National Institute of Neurological Disorders and Stroke (NINDS), and
- Office of Behavioral and Social Sciences Research (OBSSR)

Applications must focus on a disorder of the nervous system in an area of interest of the NIH Participating Institutes/Centers for the Blueprint MedTech: Incubator Hubs program.

Applications outside the mission of these participating Institutes/Centers will not receive funding. Contact Institute Program Officer for questions about **mission fit only**.

Please forward all other questions to info@blueprintneurotech.org.

https://neuroscienceblueprint.nih.gov/neurotherapeutics/blueprint-medtech/blueprint-medtech-ics-and-contacts

Eligibility

The Blueprint Hubs and NIH encourage applicants from women, underrepresented racial and ethnic groups, as well as individuals with disabilities in the translational workforce to apply.

Principal Investigators (PIs) from academic institutions, industry or non-profit organizations are invited to apply. Foreign applicants may apply.

Academic PIs must hold a faculty appointment at an institution of higher education or medical center.

PIs from industry or non-academic non-profits are not required to hold a faculty appointment.

Review Process

Applicants must first submit **pre-proposals**, which will undergo review by CINTA, NTH, and NIH program scientific staff. Pre-proposals are submitted through a simple online application form equivalent to about 4 pages (CoLab).

A subset of the applicants who submit pre-proposals will be selected to submit **full proposals** which are submitted through the same online application system. The online full proposal form is equivalent to approximately 10 pages.

A subset of the applicants who submit full proposals will be selected to participate in a **"deep dive"** evaluation, which is the final stage of review prior to funding decisions.

*sections of the form have word limits and there is an upload with a page limit, but there really is not an overall page limit per se.

General Application Information

- Applicants should review and be familiar with the program solicitation and FAQs before completing this application.

Solicitation link: **https://blueprintneurotech.org/**

FAQ link: **https://blueprintneurotech.org/faq**

- If your project addresses a mental health disorder, you are encouraged to provide preliminary data that uses quantitative, objective measures for outcomes. And to incorporate these measures into your proposal.
- Only IRB-exempt or minimal-risk clinical studies can be proposed for funding, and that minimal-risk clinical studies will be conducted at Georgia Tech's HomeLab, one of the core resources of the Blueprint Medtech program.

https://cacp.gatech.edu/research/accessibility/HomeLab

Applications that will NOT be considered

- Products not regulated by the FDA.
- Fundamental basic/applied research prior to proof of concept.
- Device technologies that do not significantly advance the state pf the art (e.g. device technology that proposes minor modifications to FDA-approved/cleared medical device technology)
- Animal model development: all *in vivo* animal models must be well-established and characterized, and available to the applicant.
- Projects focused on technologies for functional augmentation of healthy individuals.

Pre-Proposal Application Sections

1) Applicant Information

2) Solution Information

- Medical Condition
- Technology
- Clinical Need & Standard of Care (<250 words)
- Solution Description (<500 words)
- Supporting Information and/or References - Upload 1 page PDF

3) Project and Team Information

- Proposed Scope of Work (<250 words)
- Team and Environment (<250 words)
- Workforce Diversity (<200 words)
- Regulatory (<150 words)
- Support Requested (Checklist)

Lessons Learned from Previous Cycle Submissions

Common Reasons for Rejection

- **Stage of Maturity**
  - Too early (no proof of concept)
  - Too advanced (ready for clinical trials; candidate for UG/UH3 or U44)
- **Team Composition**
  - Lacking critical areas of expertise
  - No evidence of clinical collaboration
- **Impact**
  - Not significantly different from existing products
  - Only marginal impact on clinical condition
- **Mission fit**
  - Not priority area of NIH participating institutes/centers

Timeline*

Pre-Proposals

Aug 25

Pre-proposals must be submitted through the online application system by 11:59pm ET

Oct 2

Applicants Notified

Full-Proposals

Oct 30

Invited full proposals must be submitted through the online proposal submission system by 11:59pm ET

Jan 12

Applicants Notified

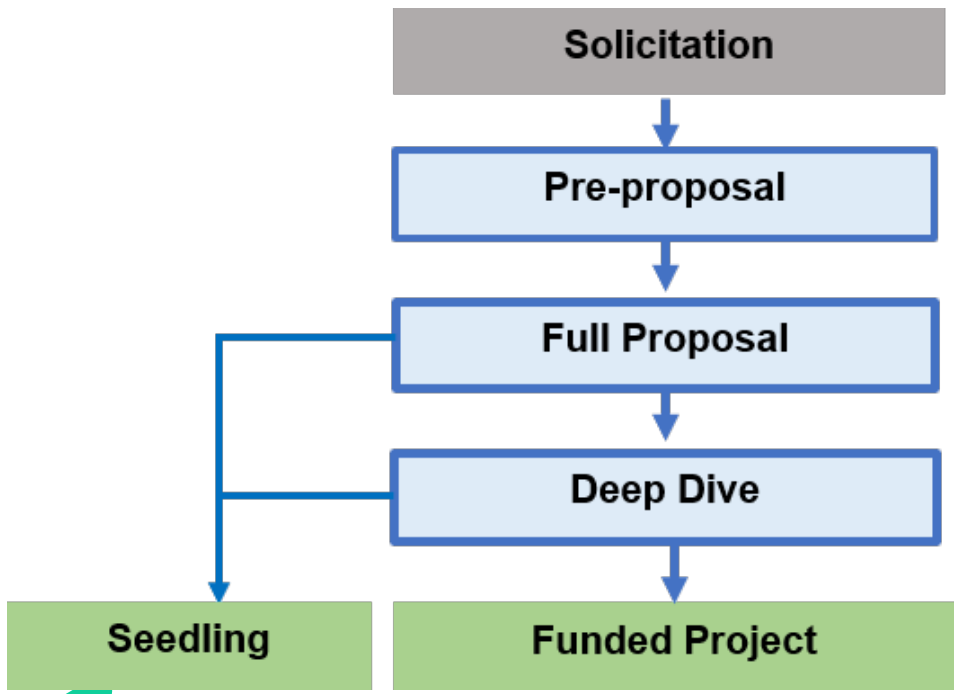
Deep Dives

Jan 16 - Feb 5

Selected full proposals will proceed to an advanced, interactive "deep dive" review stage that is expected to take two weeks, during which applicants will need to commit significant effort to respond to the deep dive inquiries.

** Two solicitation cycles per year.*

Companion Seedling Program



- A subset of all applications will be redirected as invitations to participate in the Seedling program.
- Seedlings are akin to planning grants where the two hubs will provide training and mentoring to help applicants refine the proposal to strengthen subsequent applications to the program.

Companion Seedling Program

- Seedling program is a 6-month mentorship-based accelerator program for applicants to the BPMT full award program whose solutions have one or more weaknesses in:
  - Regulatory
  - Project details
  - Team expertise
  - Scope of work
  - PEDP (Plan for Enhancing Diverse Perspectives)
- All of which would be addressable through 6 months of work with mentors and experts in these specific gap areas.

1

Prepare innovators to submit stronger applications to future BPMT Incubator Hubs solicitations, and

- improve their chances of being funded at subsequent solicitations.

2

Guide innovators proposing more clinical translational or feasibility studies to competitively submit to BPMT Translator (e.g., UG3/UH3, U44) programs

3

Guide innovators to other sources of fundings

Seedling Program Processes:

- Candidates will be interviewed by the Seedling program leadership to explore project fit with the program objectives and to gauge the team's interest in participation.
- If accepted into the program, expert mentors will be assigned to each team for individualized support.
- The team with the support of the mentor will prepare a revised budget and project plan to address identified gaps.
- Over the project period, teams will meet for 1-2 hours each week with mentors.

Summary Information

- Awards will rarely exceed $500,000 per year in direct costs. Indirect costs will be provided at your institution's Federally negotiated rate.
- The initial anticipated performance period is 12 months, which can be renewed for up to an additional three12-month periods with CINTA, NTH, and NIH approval.
- The earliest anticipated start date for funding for selected full proposals and seedlings is June 2024. (If funds are received from the Federal government and all necessary approvals are in place).
- The final aim of Hub incubator projects should be a prototype ready for first-in-human studies.
- Upon successful completion of the project, teams should either have non-governmental funding secured or be ready for entry into the companion translator solicitations from NIH:
  - Blueprint MedTech: Translator (UG3/UH3)
  - Blueprint Medtech: Small Business Translator (U44)

Contacts and Additional Resources

Webinar Slides/Schedule: https://www.cimit.org/web/center-for-innovative-neurotech-advancement/events

FAQs: https://blueprintneurotech.org/faq

Scheduling Office Hours: dlee33@partners.org
Availability: Fridays (8/4 – 8/25 from 1-3PM ET for 15 mins per team)

General Information: info@blueprintneurotech.org
617-643-3800

Good Luck!
